How to get the best results using your Gelease Gel Colour Polish

1. Choose your favourite from the huge range of highly pigmented colours available.
2. Prepare the nail by gently pushing back cuticles. File to make smooth edges and buff nail bed. Remove all traces of old nail applications, such as polish and old gel etc.
3. Prep (dehydrate) the nail using **Gelease Nail Prep Cleanser (GL03)**, brush all over and allow to dry, this helps with Gelease's staying power.
4. Apply a thin layer of **Gelease Base Coat Gel (G2816)**, taking care not to go over the edges of the nail bed or onto the skin. Cure under lamp (see below for recommended lamp settings)
5. Once cured, apply your first layer of **Gelease Gel Colour** to the nail, nice and thin, follow the same area as the base gel. Gelease applies easily like a polish so no need to overload your brush.
6. Cure under lamp. Curing time varies per lamp: It's very important not to over-cure, as this leaves the nail vulnerable to become brittle and to chip.
7. Once cured, apply the second coat of **Gelease Gel Colour** if looking for more of a vibrant, solid colour. Cure again.
8. Apply a layer of **Gelease Top Coat (G2849)** and cure.
9. Apply the **Gelease High Shine Cleanse (GL01)** to a nail wipe and buff all over the nail to remove any excess gel and leave the nail with a super high shine.
10. Brush on and massage in the **Gelease Hydration Oil (GL04)** to leave your clients cuticles and nails nourished. You can also retail this item on to your clients, ideal for them to take home to continue to care for their nails in between treatments.

Lamp Type	Curing time in seconds			
	Base Coat	Colours	Builder Gels	Top Coat
36 watt uv	60	60		80
6 watt LED	30	30		45
12 watt LED	20	20		30
48 watt LED	15	10	120	20
72 watt LED	10	5	60	10

BUILDER GEL

Gelease Builder Gel is designed to create a strong overlay, acting as a strengthening barrier for natural nails.

Follow steps **1-4** as above.

5. Apply a thin layer of **Gelease Builder Gel**, starting at the cuticle and working towards the tips, taking care to ensure the builder gel is applied with no air bubbles.

6. Cure for 120 seconds in a 48w lamp. Or cure for 60 seconds in a 72w lamp. Gelease Builder Gel is self-levelling to ensure an even application every time.

7. If you desire a thicker application, apply a second coat of Builder Gel and cure. Builder Gel must be used with a Base and Top Coat.

Builder gel can be used with or without a colour on top. Follow steps **7-10** above if applying a colour. Or follow steps **8-10** without a colour.

REMOVAL

Gelease staying power is like no other. **Removal** is quick, easy and straight forward

1. The **Foil Nail Wraps** (code **FNW05**) are a quick easy solution to removal. Simply soak the pad with **Gelease Remover** (**GL13/GL14**) and apply the pad to nail using the foil part to securely wrap around the finger.

2. Wrap the nails and leave for 10 minutes. To help the removal process place your clients hands in a towelling mitt, inside a heated mitt.

3. After 10 minutes take a wooden cuticle stick and slide it across the soaked gel, you should find that it comes away in small little crystals.

4. Finally buff the nail with a high grit buffer to leave the nail bed super smooth.
